A Comparative Effectiveness Study of Intravitreal Aflibercept, Bevacizumab and Ranibizumab for Diabetic Macular Edema (T)

Non-Protocol Study Eye Treatment for DME Form

tblTNonProtStudyEyeTrt

PtID: **(tblPtRoster.PtID)**

Patient Initials:

Study Eye: **(tblPtRoster.StudyEye)**

Record all treatments for diabetic retinopathy in the study eye that are not specified in the protocol. This includes treatments that are protocol deviations and treatments that per protocol are at investigator discretion.

If more than one treatment is given, complete a separate form for each treatment.

For drugs, a Concomitant Medication Form should also be completed.

Note: Procedures performed on the study eye for <u>anything other than DME</u> must be entered using the Study Eye Procedure form instead.

GENERAL INFORMATION

1. Treatment Date: ___ ___/___ ___ ___/___ ___ ___ ___ **(TreatmentDtDaysFromEnroll)**
dd/MMM/yyyy

2. Name of Investigator _____

3. Eye Treated ○ OD ○ OS **(TrtEye)** *"Form should only be completed for treatment on a study eye."*

TREATMENT

1. What treatment was given? (TrtGiven)

Select only one:

- ○ **Macular Laser Photocoagulation**
- ○ **Intravitreal Bevacizumab (Avastin)**
- ○ **Intravitreal Ranibizumab (Lucentis)**
- ○ **Intravitreal Pegaptanib (Macugen)**
- ○ **Other Intravitreal Anti-VEGF Drug, Describe below:**
- ○ **Intravitreal Triamcinolone Acetonide**
- ○ **Peribulbar Triamcinolone Acetonide**
- ○ **Vitrectomy**
- ○ **Other, Describe below:**

Describe:

_____
