A Comparative Effectiveness Study of Intravitreal Aflibercept, Bevacizumab and Ranibizumab for Diabetic Macular Edema (T)

Non-Study Eye Anti-VEGF Injection Information Form

tblTNonStudyEyeInj

PtID: (tblPtRoster.PtID)

Patient Initials:

Complete this form if the non-study eye will receive an intravitreal anti-VEGF injection for any indication.

PROTOCOL SPECIFIC: NON-STUDY EYE ANTI-VEGF TREATMENT

The non-study eye should receive the same anti-VEGF drug as the study eye.

1. Which anti-VEGF agent will be administered in the non-study eye? (AntiVEGFAgentAdmin)

O Anti-VEGF study drug (same drug as study eye)
O Non-Study aflibercept O Non-Study bevacizumab O Non-Study ranibizumab

1a. If non-study drug was given, was treatment approved by the Protocol Chair (or Coordinating Center designate)? O Yes O No **(NonStdyDrugGivenApprByPC)**

If No, give reason approval could not be obtained_____

2. What condition is the primary reason the anti-VEGF injection is being administered? (AntiVEGFInjCondPrimReas)

O Diabetic macular edema O Proliferative Diabetic Retinopathy O Macular edema from CRVO O Macular edema from BRVO O Neovascularization from CRVO O Neovascularization from BRVO O Neovascular glaucoma O Age related macular edema O Non-age related macular edema related to choroidal neovascularization (specify below) O Vein occlusion O Other

If 'Other' or '*Non-age related macular edema related to choroidal neovascularization*' is selected please describe: _____
