A Comparative Effectiveness Study of Intravitreal Aflibercept, Bevacizumab and Ranibizumab for Diabetic Macular Edema (T)

Baseline Protocol Specific Exam Questions

tblTRandExamQuestions

Smoking Status

1. Has the participant ever smoked cigarettes on a daily basis? O Yes O No **(SmkDaily)**

If yes, then complete 1a:

1a. Does the participant currently smoke cigarettes? (SmkCurrent)
O Yes O No, quit less than one year ago O No, quit more than one year ago

Height and Weight
If your site has the capabilities to measure height and weight please measure and record the participant's height and weight. Do NOT use the participant's self reported height and weight.

1. Height:_____ inches **(Height)** ☐ **Equipment not available (HtEquipNA)**

2. Weight:_____ lbs **(Weight)** ☐ **Equipment not available (WtEquipNA)**

Medical Conditions
Please record all pre-existing conditions on the Pre-existing Medical Conditions form. Please record all medications on the Concomitant Medications form.

1. Please indicate if the participant has had the listed condition:

- **Myocardial infarction (MI) (MICond)**
  O Yes O No knowledge of having the condition
- **Coronary artery disease (without MI) (CADCond)**
  O Yes O No knowledge of having the condition
- **Stroke (StrokeCond)**
  O Yes O No knowledge of having the condition
- **Transient ischemic attacks (TIACond)**
  O Yes O No knowledge of having the condition
- **Gastointestinal perforation (GasPerfCond)**
  O Yes O No knowledge of having the condition
- **Renal disease (Known renal disease identified through microalbuminuria testing) (RenalDiseaseCond)**
  O Yes O No knowledge of having the condition
- **Hypertension (HypertensionCond)**
  O Yes O No knowledge of having the condition
- **Severe Hemorrhage (includes hemoptysis, epistaxis, gastrointestinal, and vaginal bleeding)**
  O Yes O No knowledge of having the condition **(SevHemorrhageCond)**

RIGHT EYE (OD)

Additional Ocular History

1. Has the right eye previously received an intravitreal anti-VEGF injection for a condition other than DME?
O Yes O No (NonDMETrtVEGFHxOD)

If Yes, select time since last treatment and describe anti-VEGF drugs (if date is unknown enter approximate time)
(Enter time in months if < 1 year or years if ≥ 1 year. If < 1 year round down to lower month; e.g. 3 months and 3 weeks = 3 months):

1a. Time since last treatment: [0-11] months **OR [1 - < 2, 2 - < 5, > 5]** years
(NonDMETrtVEGFHxMonOD) (NonDMETrtVEGFHxYrOD)

1b. Describe 'Intravitreal Anti-VEGF' Treatment (s):_____
(Any drug that inhibits VEGF such as Macugen, Avastin, Lucentis, Eylea)

Additional Ocular Examination Questions

1. Have both of the following criteria for "complete focal photocoagulation" been met in the right eye?

- **All leaking microaneurysms within areas of retinal thickening or contributing to the edema that is threatening the center of the macula have been directly treated at some time with laser burns directly over the microaneurysms**
- **All areas of current retinal thickening have been treated with laser burns (either focal or grid), such that the laser burns are "on average" within 100 microns of each other (range between 50 and 150 microns) in a grid pattern throughout the area of retinal thickening**

O Yes O No O Cannot assess (i.e. no view) O Did not assess (CompleteLaserOD)

LEFT EYE (OS)

Additional Ocular History

1. Has the left eye previously received an intravitreal anti-VEGF injection for a condition other than DME?
O Yes O No (NonDMETrtVEGFHxOS)

If Yes, select time since last treatment and describe anti-VEGF drugs (if date is unknown enter approximate time)
(Enter time in months if < 1 year or years if ≥ 1 year. If < 1 year round down to lower month; e.g. 3 months and 3 weeks = 3 months):

1a. Time since last treatment: [0-11] months **OR [1 - < 2, 2 - < 5, > 5]** years
(NonDMETrtVEGFHxMonOS) (NonDMETrtVEGFHxYrOS)

1b. Describe 'Intravitreal Anti-VEGF' Treatment (s):_____
(Any drug that inhibits VEGF such as Macugen, Avastin, Lucentis, Eylea)

Additional Ocular Examination Questions

Have <u>both</u> of the following criteria for "complete focal photocoagulation" been met in the left eye?

- **All leaking microaneurysms within areas of retinal thickening or contributing to the edema that is threatening the center of the macula have been directly treated at some time with laser burns directly over the microaneurysms**
- **All areas of current retinal thickening have been treated with laser burns (either focal or grid), such that the laser burns are "on average" within 100 microns of each other (range between 50 and 150 microns) in a grid pattern throughout the area of retinal thickening**

○ Yes ○ No ○ Cannot assess (i.e. no view) ○ Did not assess (CompleteLaserOS)
